

Thomas Weber

Name	**Thomas Weber**
	married, 2 kids
Age	45 years old
Occupation	Mechanical engineer
	(currently on sick leave)
Residence	Suburb of a major city

Background & Life Situation
Afew months ago, Thomas suffered a traumatic brain injury following a workplace accident. Since then, he has had dysarthria, which manifests as slurred and unclear speech. In addition, his speech rate has slowed. He lives with his family and would like to remain as independent as possible. For him, communication in daily life and at work is important.

Needs & Goals
- Thomas wants to regain his clear, comprehensible speech.
- He wants exercises that can be easily incorporated into his daily routine.
- He needs motivation through tangible progress in his therapy (progress).
- He needs flexible training options.

Emotional level
Thomas is struggling with communication difficulties (frustration, social withdrawal). However, he is determined and wants to play an active role in his rehabilitation.

Tech-savvy
Thomas regularly uses computers and smartphones. He prefers user-friendly interfaces, clear layouts and progress bars.

Barriers
During prolonged conversations, he becomes tired and feels insecure in new conversational situations.

Communication style
Thomas needs clear, easy-to-understand language and the occasional repetition. He appreciates positive feedback and support from the therapeutic environment.

Patient: Thomas Weber

Elke Bauer

Name	**Elke Bauer**
	married, 3 kids
Age	67 years old
Occupation	Retired,
	Former office clerk
Residence	On the outskirts of a medium-sized town

Background & Life Situation
Elke had a stroke two years ago and has been suffering from dysarthria ever since. Her symptoms include slurred, slow and sometimes unintelligible speech. She lives at home with her husband and children, who support her. However, she would like to take a more active part in social life again and speak more clearly

Needs & Goals
- Elke's goal is to improve her articulation, so that she can make herself better understood in everyday situations.
- She wants to be motivated by visible progress and simple exercises.
- She would like to use the app at home as well and needs it to be user-friendly.

Emotional level
As Elke is frustrated by the slow progress, she needs patience, support and encouragement from therapists and her family.

Tech-savvy
Although Elke uses a tablet, she is otherwise not very tech-savvy. She therefore needs a simple and intuitive interface and visual aids.

Barriers
Talking tires her out, which is why she gets exhausted quickly. Furthermore, she fears that her poor articulation will lead to social isolation.

Communication style
Elke can express herself clearly but struggles with the clarity of her pronunciation. She needs slow and clear instructions and positive encouragement.

Patient: Elke Bauer

Lara Becker

Name	**Lara Becker**
	Single, lives with flatmates
Age	29 years old
Occupation	Marketing manager (part-time)
Residence	Major city

Background & Life Situation
Lara was diagnosed with multiple sclerosis eight months ago, which is leading to slowly progressive dysarthria. She is creative, socially active and communication oriented. She wishes to remain independent both professionally and privately despite her speech impairment and improve her communication skills.

Needs & Goals
- Lara would like clearer articulation and more fluent speech in her professional and private life.
- She would like flexible training that can be easily integrated into her hectic daily routine.
- Interactive and easy-to-use therapy tools should motivate her to train.

Emotional level
Lara feels restricted by her illness but wants to retain a positive sense of control. She wants support and motivation to exercise but doesn't want to be told what to do.

Tech-savvy
Lara makes extensive use of her smartphone, tablet and apps. She expects a modern and intuitive interface with personalised settings.

Barriers
Language misunderstandings in meetings leave her feeling frustrated. Juggling work and therapy are stressful for her and puts her under time pressure.

Communication style
Lara would like clear and concise exercise instructions with visual guidance, as well as visible progress indicators and feedback features.

Patient: Lara Becker

Jana Fischer

Name	**Jana Fischer**
Age	35 years old
Occupation	Self-employed speech and language therapist with her own practice
Experience	10 years, specialising in neurological and motor speech disorders, e.g. dysarthria
Working environment	One-to-one sessions and home visits, adults and children

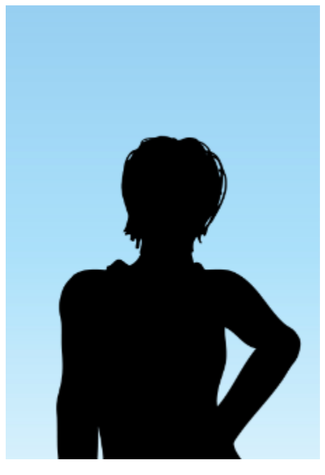

Requirements for the application
- Customisable exercises for different levels of difficulty and stages of treatment.
- The app should encourage patients to exercise regularly at home (reminder function).
- It should be easy for patients and their families to understand and use.
- Logging and progress monitoring should be available, ideally with an export function for
- Therapy reports.
- It should integrate well with practice and documentation systems.

Background & Approach
Jana works with children and adults, often following a stroke. She places great emphasis on personalised therapy and supports patients both in the clinic and at home. In the practice, she works with digital media and is looking for a flexible and easy-to-use app that can also be used by patients without technical experience.

Emotional level
Jana is committed to the well-being of her patients and is always on the lookout for new therapeutic approaches. She values tools that save time and support individual therapeutic progress.

Tech-savvy
She does not use complex IT systems but is familiar with digital tools. She expects clear structures, straightforward operation and reliable support.

Speech-Language Pathologist: Jana Fischer

Sabine Krüger

Name S	abine Krüger
Age	42 years old
Occupation	Speech and language therapist at a neurological rehabilitation clinic
Experience	15 years, specialising in neurological and motor speech disorders, e.g. dysarthria
Working environment	Multidisciplinary teams, close collaboration with doctors, physio-therapists and occupational therapists

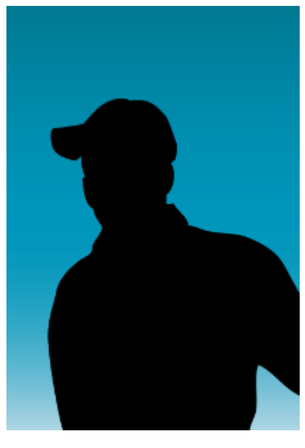

Requirements for the application
- Exercises should be quick and easy to adapt to the individual severity of the condition and the needs of patients.
- Progress tracking should make therapeutic progress transparent.
- The app must be clearly structured and easy to use to save time in day-to-day therapy.
- Motivational elements and immediate feedback should encourage patients to practise.
- The app should provide communication channels to support home practice.
- The app should integrate easily with existing devices (PC, tablet).

Background & Approach
Sabine primarily works with patients who have neurologically caused speech disorders such as dysarthria following a stroke or traumatic brain injury. She works in group or one-to-one therapy sessions, often using mobile or tablet-based aids. She places great emphasis on individual treatment plans and aims to make progress visible.

Emotional level
She wants to provide patients with the best possible support whilst inspiring them herself. To this end, she is looking for practical tools that make therapy more efficient but still leave time for personalised care.

Tech-savvy
Sabine uses tablets and PCs on a regular basis in her practice. She expects reliable software with good usability and minimal support requirements.

Speech-Language Pathologist: Sabine Krüger

Gary Meier

Name	**Gary Meier**
	Single
Age	28 years old
Occupation	Social worker
	(lives in a shared flat)
Residence	Large city

Background & Life Situation
Gary is helping his uncle, who is suffering from dysarthria following a stroke. He visits him regularly and supports him digitally, as they live apart. As a social worker, he is well versed in digital applications. Gary wants to actively support his uncle with his therapy and keep himself informed.

Needs & Goals
- Simple, mobile users of the app for regular exercise support, even when out and about.
- Clear progress indicators to make achievements visible.
- Communication with therapists and opportunities to exchange ideas with other family members.
- Reminder functions for exercises.
- Motivating and interactive elements for a varied training programme.

Emotional level
Gary is dedicated, empathetic and proactive in his support. He seeks efficient solutions that save time and positively support the therapeutic process.

Tech-savvy
He is very tech-savvy and makes extensive use of smartphones, tablets and apps in his day-to-day life. He expects an intuitive and modern application with multimedia content.

Barriers
Gary's job leaves him with limited time, and he is looking for straightforward, time-saving features that aren't too complicated.

Communication style
He uses digital communication channels for the rapid exchange of information and prefers short, concise messages accompanied by visual aids.
